

Parallelism !

ONLY DO THIS ON THE WORKSHOP DESKTOP PCs

```
mkdir /tmp/par
```

```
cd /tmp/par
```

```
e2parallel.py dcclient
```

```
--port=9990 --server=129.7.224.114 --verbose=2
```

Using GUI Tools

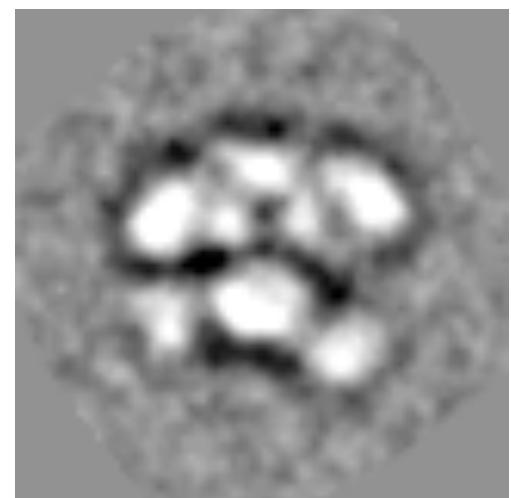

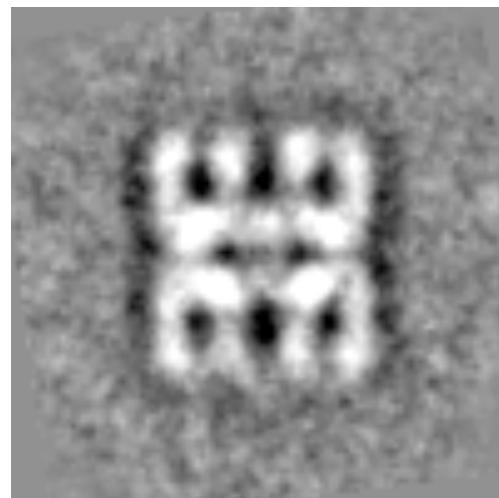

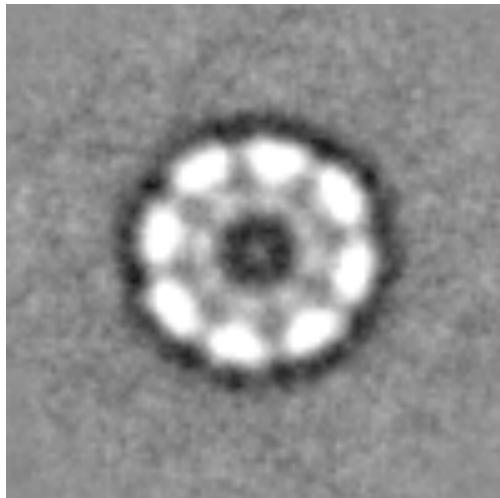

- ④ e2display.py - same as 'browse' in workflow
- ④ e2helixboxer.py - first step in IHRSR
- ④ e2tomoboxer - will demo tomorrow
- ④ e2simmxxplor.py & e2cmpxplor.py

A Few Utility Programs

- ⑥ e2help.py - Documentation for modular functions
- ⑥ e2bdb.py - database manipulation and querying
- ⑥ e2iminfo.py - general image information tool
- ⑥ e2proc2d.py - 2d image processing of stacks and single images
- ⑥ e2proc3d.py - 3d image processing of 3-D stacks and single volumes

Flexibility and Dynamics

- e2refine2d.py - reference free class-averages, apply sequentially
- e2stacksort.py - sorts a stack into a pseudotime sequence
- e2stackanim.py - makes gif animations out of sequences
(requires ImageMagick)
- e2refinevariance.py - resampling with replacement on class-averages, conceptually similar to Hyperstratis (I think)
- e2refinemulti.py - multiple map simultaneous refinement
- e2classifyligand.py - Split data into 2 groups based on 2 models

Other Issues

- ➊ History file
- ➋ Resolution exaggeration
- ➌ Wiki
- ➍ Python prompt (e2.py)
