Homework 10

- Take the program from homework 6 and add a basic GUI to it. When you run the program it should open a window with at least 3 buttons. One should open a file dialog and allow the user to select a file to be read in. The other should display a histogram of the values from the file using matplotlib. The third should exit the program. Feel free to add additional buttons if you like but 3 is all that is required.

- This homework is not due until next THURSDAY.

- DON'T FORGET TO WORK ON YOUR CLASS PROJECTS
