

# Homework 7

- Take the program from homework 5 and add a basic GUI to it. When you run the program it should open a window. The window should contain a button to open a file dialog and allow the user to select a CSV file to plot. There should be two text boxes (Entry) where the user can enter the numbers for the x & y column numbers. Finally, there should be another button to display the plot. Feel free to add additional widgets if you like, but this is all that's required.
- Add more buttons or make it more refined for an extra credit point if you're trying to make up for a missing or poor previous assignment.
