

Multiscale Structural Visualization with UCSF Chimera

Tom Ferrin

Depts. of Pharmaceutical Chemistry and Biopharmaceutical Sciences
Resource for Biocomputing, Visualization, and Informatics

UCSF

University of California at San Francisco

Outline

Today:

Chimera overview

Introductory demo

Bluetongue virus demo

Tomorrow - Tom Goddard "hands-on" exercise:

Chimera Volume Viewer extension

Cell

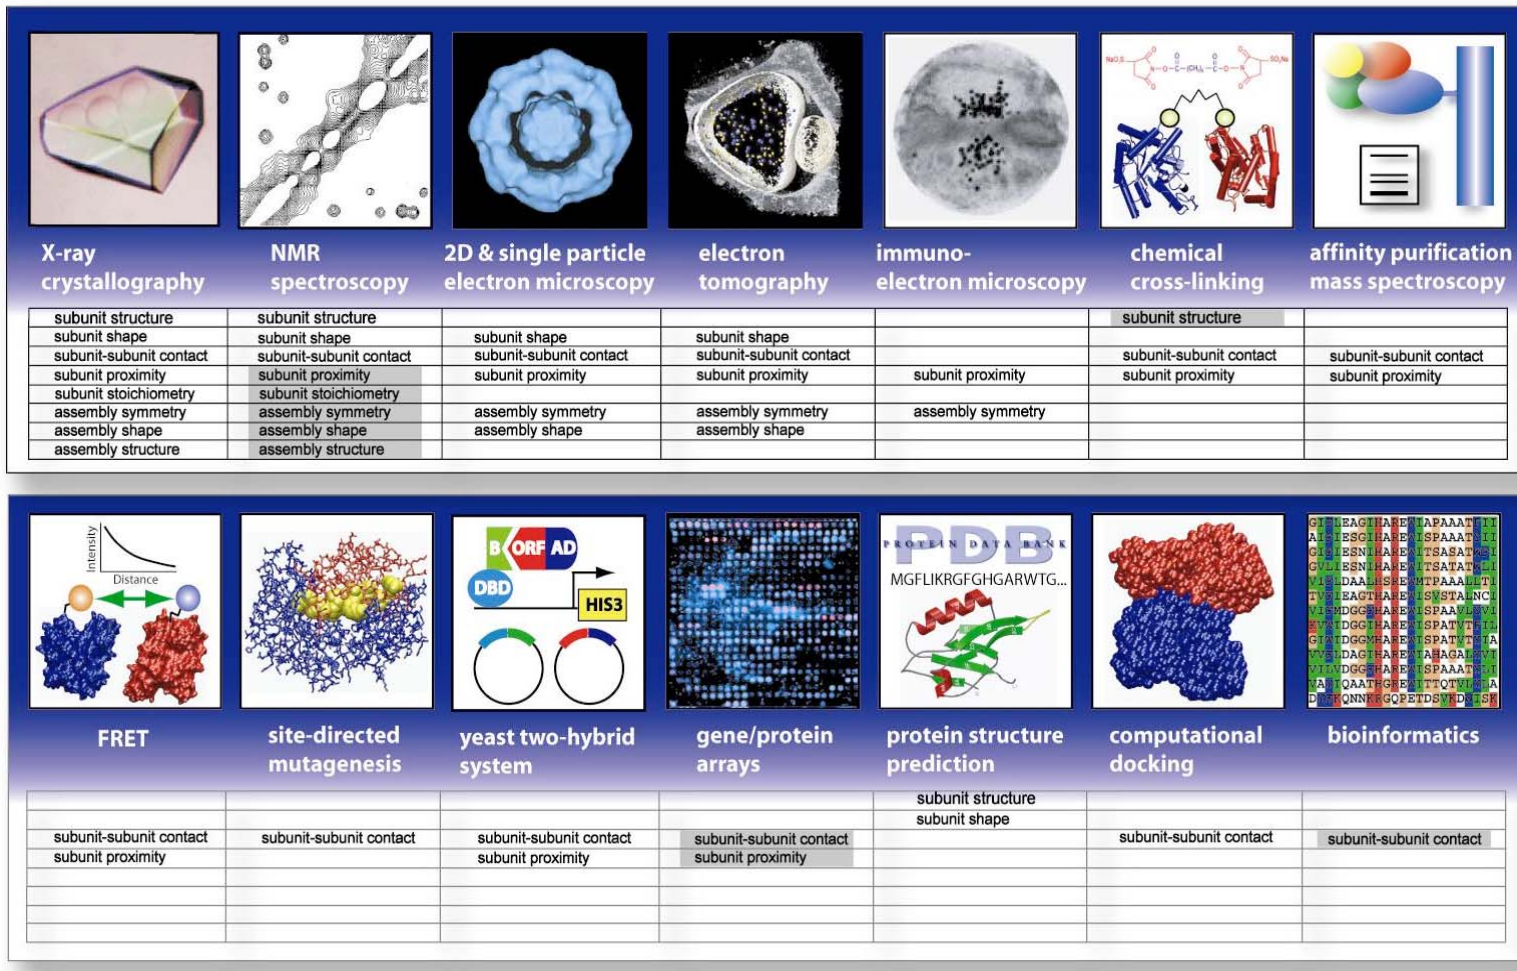

Determining the Structures of Proteins and Assemblies

Structural information from...

source: measurement and models

resolution: low or high resolution

Sali, Earnest, Glaeser, Baumeister. From words to literature in structural proteomics. Nature 422, 216-225, 2003.

Resource for Biocomputing, Visualization, and Informatics

We are an NIH Biomedical Technology Resource Center, funded by the National Center for Research Resources. We create innovative computational and visualization-based data analysis methods and algorithms, turn these into easy-to-use software tools which we distribute to the scientific community, and apply these tools for solving a wide range of genomic and molecular recognition problems within the complex sequence → structure → function triad.

**National Center for
Research Resources**

Sample application areas

Insight into molecular structure and function:

- Protein engineering

- Drug design

- Biomaterials design

- Annotation of protein function from sequence and structure

Gene annotation, characterization, and interpretation:

- Pharmacogenetics - understanding and prediction of variation in drug response due to genetic factors

- Mouse gene knock-outs for modeling of human disease

UCSF Chimera - an Extensible Molecular Modeling System

Chimera is an extensible interactive 3-D modeling system designed to allow developers to quickly incorporate novel visualization algorithms and analysis tools

Chimera runs on laptops/desktops and takes maximum advantage of low-cost, state-of-the-art graphics chips

\$500 today buys you 3-D interactive graphics capabilities that cost \$20,000 five years ago

Chimera has extensive documentation for users and developers to enable effective scientific studies to be accomplished rapidly and with a "low entry barrier"

Documentation and Distribution

Documentation

- Extensive User's Guide
- Basic Programmer's Guide

Training

- On-line "Getting Started" tutorial
- Periodic workshops

Platforms

- Windows 98/2000/XP
- Mac OS X
- Linux, SGI, HP Alpha

Availability

- Download from our Research Resource Center web site after simple "click to accept" license agreement

Chimera's Built-in Features

Molecular Graphics:

- interactively manipulate stick, ball-and-stick, CPK, ribbon representations, and molecular surfaces
- highly intuitive model translation, scaling, and rotation
- interactive color editing
- ability to save high resolution images for presentation and publication
- stereo viewing

Chemical Knowledge:

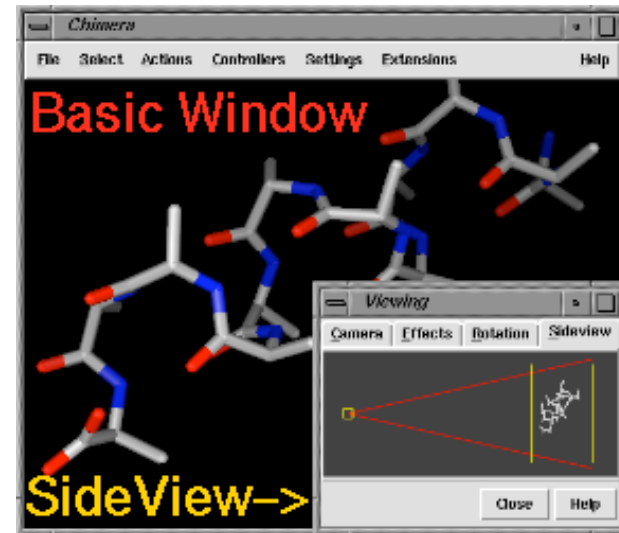

- determination of atom types in arbitrary molecules
- ability to add hydrogen atoms
- high-quality hydrogen bond identification
- selection of atoms/bonds by element, atom type, functional group, and amino acid category
- interactive bond rotation, distance, and angle measurements

Chimera's Programmability/Extensibility

Chimera is designed to allow developers to quickly incorporate novel algorithms and analysis tools

- Extensions can control standard Chimera user interface features (e.g. camera, help, menus, toolbar), as well as create their own custom graphical user interfaces
- Extensions are written in the Python programming language
 - Python is easy to learn, even for novice programmers
 - Python is object-oriented and provides features needed for development of complex codes
 - ~30 extensions written to date

Learn more about Python

Python Web site:

www.python.org

Good book:

"Learning Python"

by Mark Lutz & David Ascher

Available from

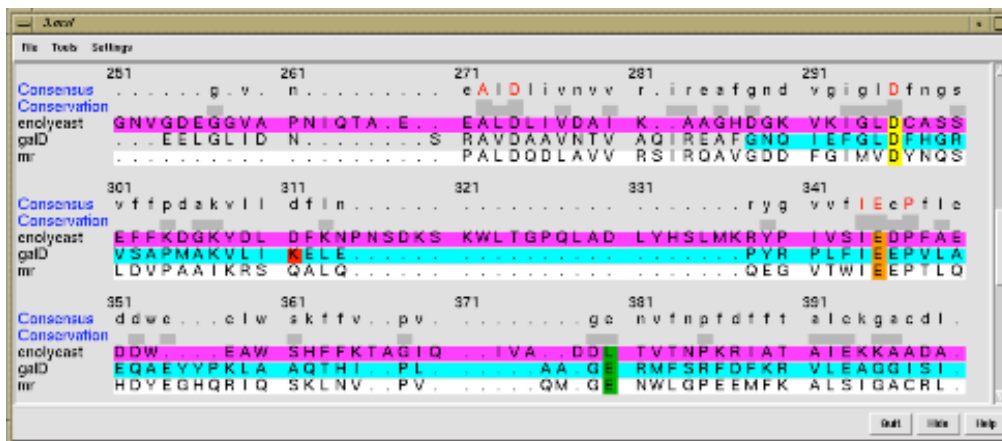

www.oreilly.com/catalog/lpython2

Sample Chimera Extension

Multalign Viewer

- Simultaneously displays multiple protein sequence alignments and corresponding structure superpositions, calculates and displays consensus sequence and conservation histogram, and highlights corresponding regions in both sequence and structure space

Sample Chimera Extension

Molecular Dynamics Trajectories

- All built-in Chimera analysis and display capabilities also work with trajectories. Support is provided for a number of common programs: AMBER, CHARMM, GROMOS, MMTK, NAMD, PDB, and X-PLOR.

Sample Chimera Extension

Movie Recorder

Capture image frames from Chimera and assemble these into a movie file

Formats supported:

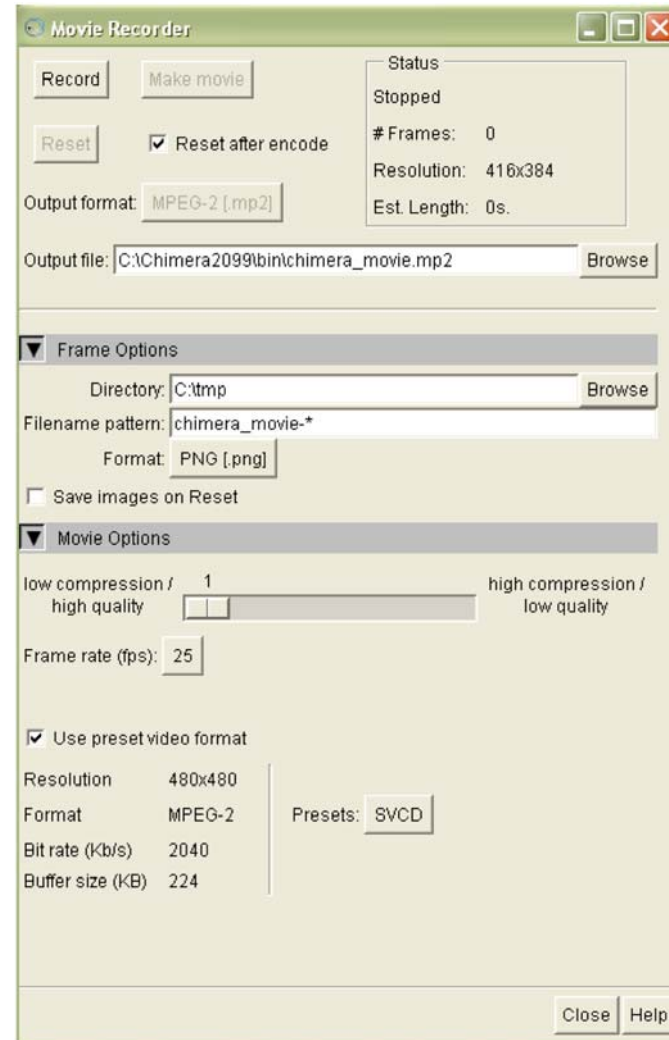

MPEG-1

MPEG-2

MPEG-4

Quicktime

(New feature in release 2104)

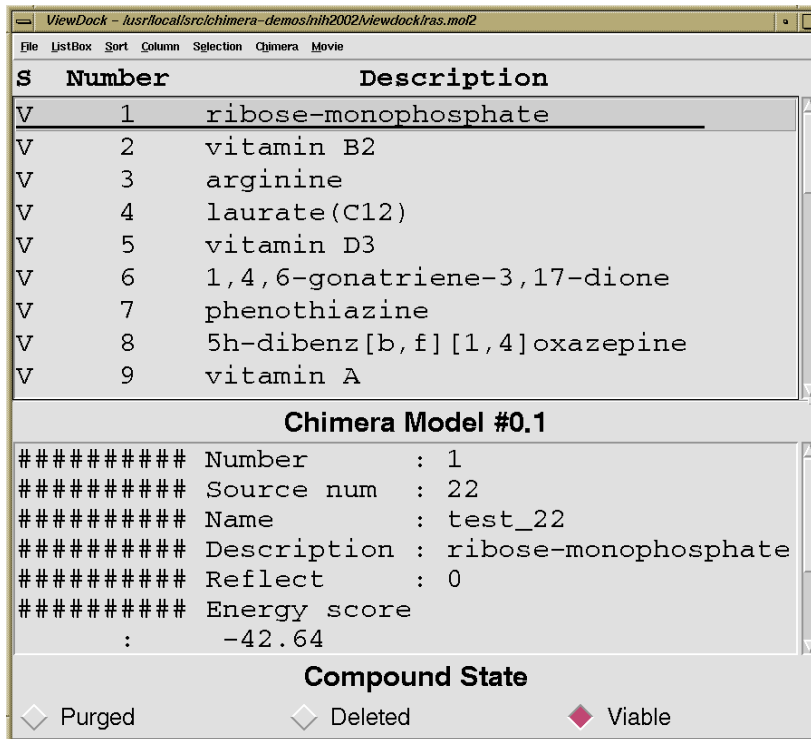

Sample Chimera Extension

ViewDock

- Rapid screening of promising drug candidates found with the UCSF DOCK program

ViewDock - /usr/local/src/chimera-demos/nih2002/viewdock/tras.mol2

File ListBox Sort Column Selection Chimera Movie

S	Number	Description
V	1	ribose-monophosphate
V	2	vitamin B2
V	3	arginine
V	4	laurate(C12)
V	5	vitamin D3
V	6	1,4,6-gonatriene-3,17-dione
V	7	phenothiazine
V	8	5h-dibenz[b,f][1,4]oxazepine
V	9	vitamin A

Chimera Model #0.1

```
##### Number      : 1
##### Source num  : 22
##### Name       : test_22
##### Description : ribose-monophosphate
##### Reflect    : 0
##### Energy score
      :      -42.64
```

Compound State

Purged Deleted Viable

Sample Chimera Extension

Volume Viewer

- An extension for visualizing three-dimensional numerical data sets

Sample Chimera Extension

Multiscale Modeling

- useful for exploring models of large molecular complexes
- combines volume visualization and atomic resolution capabilities
- example systems include viruses and chromosomes
- GroEL model: 14 copies of the monomeric GroEL crystal structure docked to a 10.3 Å electron microscope map

Chimera Demonstration #1

Introduction to molecular representation and basic use

Files used: 2gbp.pdb

Features illustrated:

- Opening files

- Selecting and displaying atoms, bonds, and surfaces

- Manipulating models: rotate, translate, scale, clip

- Display styles: wireframe, sticks, balls&sticks, CPK

- Command line

Additional information: UCSF Chimera - A Visualization System for Exploratory Research and Analysis, *J. Comp. Chem.*, 25(13):1605-1612, 2004.

Chimera Demonstration #2

Bluetongue Virus Core

- PDB structure 2btv by David Stuart's lab (Nature 395: 470-478, 1998)
- Full particle 700 Å diameter, 3.5 Å resolution, 1000 crystals and 3×10^6 atoms (no hydrogens)
- Multiscale extension makes 60 copies of unit cell
 - Outer layer: 260 trimers of VP7 protein in 5 symmetry classes
 - Inner layer: 60 dimers of VP3
- Extension focuses on hierarchical structure relationships and their selection and display

Additional information: Software Extensions to UCSF Chimera for Interactive Visualization of Large Molecular Assemblies, Structure, 13(3):473-482, 2005.
